

Tak W. Mak, OC, PhD, DSc, FRSC, FRS. □□ Tak W. Mak is the Director of the Campbell Family Institute for Breast Cancer Research at the Princess Margaret Hospital, and a University Professor in the Departments of Medical Biophysics and Immunology at the University of Toronto. Dr. Mak's research interests center on immune cell recognition/regulation, molecular mechanisms underlying the survival and death of normal or malignant cells, as well as the role of inflammation in the progression of autoimmune disease and cancer. In addition, Dr. Mak has devoted a large portion of his research to investigating the pathogenesis of cancer. In particular, he is interested in mechanisms of metabolic transformation in order to identify potential targets for novel cancer therapeutics. He is best known as the lead scientist of the group that first cloned the genes of the human T cell antigen receptor, a discovery that provided essential insights into the molecular basis of cellular immunity. Dr. Mak's many accomplishments have been recognized by the scientific community through numerous prestigious awards and honours.
